

Crown Plus Smarter Working and Delivery Solutions.

At Crown Plus we pride ourselves on our “smarter working and delivery solutions” allowing for improved efficiencies with positive results in time and cost savings. Our latest advancements in our drainage surveying services provide our clients with faultless data sets within 20 days of our site works being complete.

It's not just what we do, it's how we do it!

Our surveying operations fully utilise a range of both bespoke and nationally available systems to provide a more efficient approach to post processing data, thus higher quality and 50% faster data from site to our clients. In addition, we structure our in-house technical teams to ensure that just one highly skilled colleague manages the process from desk study to delivery, which dramatically reduces any time and resource waste incurred in handovers for example between GIS and CAD departments. These actions provide our clients with the ability to identify drainage issues sooner, allowing the reactive remediation of defects often utilising the existing traffic management programmes.

Gary Price, Operations Director says *“Smarter working is ingrained in our thinking, we continually look for ways to improve our service, not only to innovate but to completely utilise new technology and systems to allow us to stay ahead of the game with providing faster, higher quality, results, and solutions”.*

We look to work with our clients to provide time and costs saving solutions in the delivery phase of every project. Timely reporting of our survey findings provides our clients with significant resource savings, especially given road space availability is at a premium across all areas of the highspeed road network”.

On a recent highway drainage scheme in the Southeast, we were able to report the identified defects back to our client in such a timely manner that they were able to instruct repairs, which we undertook utilising our in-house teams within 24hours of the defect being identified”.
